EXTERNAL RESISTOR

Switches are normally fitted with internal resistors to operate on 5, 12, 24V DC supply. In case of non-resistor type, suitable external current limiting resistors must be installed as shown by the table and formula.

The value of the series resistor can be determined by the formula:

$$R = \frac{V_{CC} - V_F}{I_F}$$

V_{CC}: Supply Voltage
V_F: Forward Voltage
I_F: Forward Current

Notes for Split-Face and Dual-Color Illumination type

In case of using Split-Face & Dual-Color, sometimes built-in resistor type cannot be used because of heating. Please note followings:

1. Split-Face

- (1) 5V use : Select 1 (5V built-in resistor). Simultaneous lighting is possible.
- (2) 12V use: Select 2 (12V built-in resistor). However in case of simultaneous lighting, please select 6 (Split-Face non resistor) and apply external resistor accordingly.
- (3) 24V use : Either do or not do simultaneous lighting, cannot select 3 (24V built-in resistor). Please select 6 (Split-Face non resistor) and apply external resistor accordingly. Simultaneous lighting is possible.

2. Dual Color

It is impossible to do simultaneous lighting with all 5V,12V,24V. In case of simultaneous lighting , please select 4,5, respectively and apply external resistor.

ORDERING CODE2

It is possible to order Light Cartridge, Flange Case, Switch Unit individually.
